

Veterinary Ventilator

VET - 60V

Ventilator VET-60V is widely apply in vet hospital, animal R&D institute, university laboratory, animal clinic, animal zoo etc. It is suitable for animals weighing 5-100kg.

Features:

1. Automatic IPPV mode enables the breathing automatically and improving animal comfort during surgery.
2. LCD digital display with Real-time display of critical parameters (e.g., pressure, tidal volume, respiration rate) for accurate monitoring and informed decision-making
3. Built-in battery provides over 2 hour of continuous operation – reliable even during power outages.
4. Easily matches with various brands of veterinary anesthesia machines

Specification:

Driving Gas: O₂ or Air; Inlet pressure: 0.35-0.65Mpa;

Bellow: 0-300ML&0-1500ML

Multiple Alarm: Low Battery, Power failure, Airway pressure high/low

Monitor: Tidal volume, breathing rate, I:E ratio ratio, Peak airway pressure

Standard Configuration

Main unit, 2 bellows, folded bag, bellow cover, medical grade corrugated pipelines, O₂ supply pipeline, power cable, flow sensor
